THULANE NCHOLO

FULL STACK DEVELOPER

ABOUT ME

I am a self-taught software developer with hands-on experience in Python, Django, and front-end web development. I enjoy building scalable, user-friendly web applications that solve real business problems. Passionate about continuous learning, I am always exploring new technologies and improving my development skills. I have strong problem-solving abilities and attention to detail and enjoy working on innovative projects that create real value for users and businesses.

WORK EXPERIENCE

2020- 2026

Freelance Full Stack Web Development

Developed and delivered custom web applications for clients across various industries, focusing on responsive design, functionality, and business efficiency. Worked on both front-end and back-end development using technologies such as Python, Django, HTML, CSS, JavaScript, HTMX, and Bootstrap. Collaborated with clients to understand project requirements, implement tailored solutions, and maintain high-quality user experiences throughout the development process.

MY PROJECTS

ProofCred – Document Collection SaaS

ProofCred is a web-based platform designed to simplify document collection and management for professionals such as accountants, consultants, and rental agents. The system allows users to request documents via shareable links, track submission status in real time, and securely download uploaded files. I was responsible for developing the platform using Django, implementing features such as user authentication, file uploads, status tracking, and ensuring a seamless, user-friendly experience.

Consulmet – Employee Verification Platform

Consulmet is an employee management platform that generates QR-code-enabled employee business cards linked to digital employee profiles. Developed using Django, the system includes QR code generation, profile management, downloadable employee cards, and employee verification features.

AssetsHQ Property Management Application

Designed and developed a robust property management platform that streamlines the management of rental properties, tenant applications, maintenance requests, and inspections. The system provides an intuitive, user-friendly interface that enhances efficiency for property managers while improving the tenant experience.
